Bridge Bit
BRIDGE YOUR WAY

Your **Bridge** To Financial

FREEDOM

VISA

INTRODUCTION

The financial world is undergoing a rapid change. Companies, banks and entire nations, are opening up to digital money and the acceptance of cryptocurrencies. Their strong wish however, seeks regulation and full transparency, neutralising the actual advantage of decentralised blockchain technology.

INTRODUCTION

Never has it been more important as today, to maximise efficiency, security, and speed in payment transactions.

Bridge Bit

Leading crypto exchanges have long recognised this need and have been offering to their customers, so-called debit cards. Some of them have been shut down already, others will be in the future, due to the same reasons, which mentioned above.

PROBLEMS

At one side, this is a smooth system, for integrating digital assets into the payment of your everyday needs.

However, dependence on the exchange contains more and more risks.

These Providers are obliged to comply with regulations, have sovereign rights over customer funds, can freeze entire accounts, set arbitrary individual limits for certain users or are forced to restrict transactions to maximum amounts due to regulatory requirements.

ABOUT US

Bridge Bit is a decentralised organisation, a bridge built between end consumer and institution through the power of blockchain and web3, while creating the unique opportunity in making crypto spendable through traditional and well known ways.

All funds are always routed directly to the issuing bank partner, making the process fully independent of any third party. The use of smart contracts on the blockchain ensure the safety of funds at all times.

OUR SOLUTION

01

Quick KYC and fast shipping of our VISA cards

02

First offshore payment, accessible for everyone and decentralised

03

Unique ready-to-go solution

04

Instant funds loading system, guarantees a rapid availability of your assets on your VISA card

05

Pay directly from exchanges through the classical way

06

Use our own decentralised web3.0 infrastructure for top-ups and card purchases

07

Passive Income through unique marketing plan and residual income

08

Optimal in performance, flexibility and security

09

Longevity of product marketing with the fast growth benefits of crypto
